To Whom It May Concern:

Trane Technologies subcontracted Gaylor Electric to perform the electrical (power) scope of work at the recently completed Greater Lafayette Career Academy located in Lafayette, Indiana.

When directed Gaylor applied all available resources and provided suggestions to help mitigate and resolve issues that are inevitable with renovation projects such as this one. In addition, when necessary Gaylor stepped forward and took responsibility to correct and/or repair oversights and conditions that developed over the course of the project implementation.

In summation, though the project was not without its challenges, Gaylor Electric never lost sight of providing the customer with a quality installation and performing to the best of their ability. Gaylor remained enthusiastic throughout and remained determined to deliver on their subcontracted scope of work.

Thank you.
