

In January of 2017, Gaylor Electric partnered with A M King to perform the electrical Design/Build scope for the Factory in Speedway Indiana. This facility is approximately 34,000 square feet complete with state of the art retractable basketball equipment, volleyball nets, and divider curtains. Early in the design phase, Gaylor brought the expertise needed to provide the power requirements for both the owner's current and future needs. Design coordination was flawless which allowed for a seamless transition from the office to the field.

The duration of the project was close to eight months and Gaylor had a dedicated crew either on site a phone call away to provide the services needed to progress through each phase of construction. The team was timely with submittals and closeout documentation as well. There were always one or two Gaylor employees present at the weekly jobsite coordination meetings. Throughout the project, Gaylor maintained a safe work environment, and oftentimes when out of their way to make sure other subcontractors were keeping to the high safety standards that were expected.

A M King works with Gaylor Electric on multiple projects across the country. The attention to detail and customer service is consistent with each office we have partnered with. I recommend Gaylor Electric for all electrical services in the Design/Build Industry. Their knowledge and professionalism will not go unnoticed.

Thank you

Daniel Kinard
