## Gaylor's Performance at DRT Project Fenice-Huntsman

O'Neal was hired by DRT Americas to design and build a Turpentine facility in Rincon, GA. O'Neal began subcontractor selection. After interviewing various electrical contractors, we selected Gaylor as the prime electrical contractor because of their ability and commitment towards delivering a quality product in a fast and safe manner.

Gaylor was on site since day one to coordinate and commence installation of all electrical feeds for the new facility. Gaylor has effectively coordinated design and construction of all tasks that has been assigned to them very efficiently. Their field staff has demonstrated and ensured success of the project by working every day the site has been open continuously throughout the job. They have worked systematically to meet all deadlines and to implement safety protocols that coincide with our system. Gaylor has stood behind their quality of workmanship by properly testing and commissioning equipment before turn over to the owner. They completed over 15,000 field hours with no first aid or recordables.

Finally, Gaylor made excellent use of the latest technology such as 3D BIM modeling and utilizing handheld electronic devices to make sure everything progressed according to plan. In the end Gaylor's effort and hard work paid off.

I would not hesitate to recommend Gaylor to any owner looking to construct an industrial facility in a timely, economical, and safe manner.

Alan Gaskill
